

INSTRUCTIONS:

Fill out the hazard analysis and risk assessment below.

HA-001 should be for the lane departure warning function as discuss

HA-002 should be for the lane keeping assistance function as discuss

Then come up with your own situations and hazards for the lane assi

When finished, export your spreadsheet as a pdf file so that a review

Hazard ID			
	Operational Mode	Operational Scenario	Environmental Details
HA-001	Normal Driving	OS04 - Highway	EN06 - Rain (slippery road)
HA-002	Normal Driving	OS03 - Country Road	EN01 - Normal conditions
HA-003	Normal Driving	OS02 - City Road	EN04 - Snowfall (degraded view)
HA-004	Normal Driving	OS02 - City Road	EN03 - Fog (degraded view)

 stance system. Fill in the HA-003 and HA-004 rows.
 er can easily see your work.

Situational Analysis			
Situation Details	Other Details (optional)	Item Usage (function)	Situation Description
SD02 - High speed		IU01 - Correctly used	Normal Driving on Highway during Rain with High speed and correctly used System
SD02 - High speed		IU02 - Incorrectly used	Normal driving on country roads during normal conditions with high speed (the driver is misusing the lane keeping assistance function as an autonomous function)
SD01 - Low speed		IU01 - Correctly used	Normal Driving on City Road during Snowfall (degraded view) with Low speed and correctly used System.
SD01 - Low speed		IU01 - Correctly used	Normal Driving on City Road during Fog (degraded view) with Low speed and correctly used System

Hazard Identification			
Function	Deviation	Deviation Details	Hazardous Event (resulting effect)
Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback	DV04 - Actor effect is too much	The lane departure warning function applies an oscillating torque with very high torque amplitude (above limit) and The lane departure warning function applies an oscillating torque with very high torque frequency (above limit)	EV00 - Collision with other vehicle
Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	DV03 - Function always activated	The lane keeping assistance function is not limited in time duration which leads to misuse as an autonomous driving function.	EV00 - Collision with other vehicle
Lane Departure Warning (LDW) function shall apply an oscillating steering torque to provide the driver with haptic feedback	DV02 - Function unexpectedly activated	The lane departure warning function unexpectedly activates and starts oscillating the steering wheel during normal city driving.	EV00 - Collision with other vehicle
Lane Keeping Assistance (LKA) function shall apply the steering torque when active in order to stay in ego lane	DV19 - Sensor detection is wrong	The lane keeping assistance function is not able to detect lane markings when the road is covered with snow	EV00 - Collision with other vehicle

Event Details	Hazardous Event Description	Exposure (of situation)
High haptic feedback could make the driver could lose control of the vehicle and collide with another vehicle or with road infrastructure.	Loss of control of the vehicle	E3 - Medium probability
The driver could treats the function as an L4 function and take his hands off the steering. The vehicle could colids with another vehicle.	Loss of control of the vehicle	E2 - Low probability
Unexpect haptic feedback could make the driver could lose control of the vehicle and collide with another vehicle or with road infrastructure.	Loss of control of the vehicle	E4 - High probability
The Sensor could detect the lanes unexpectly under bad weather. The vehicle could calida to other vehicles.	Loss of control of the vehicle	E4 - High probability

Hazardous Event Classification			
Rationale (for exposure)	Severity (of potential harm)	Rationale (for severity)	Controllability (of hazardous event)
driving on highway when it is raining occurs once a month or more often for an average driver	S3 - Life-threatening or fatal injuries	On highway speed of vehicle is expected to be high	C3 - Difficult to control or uncontrollable
The driver is on a country road and misusing the system. That combination probably does not happen often, so we will label the exposure E2	S3 - Life-threatening or fatal injuries	On country roads speed of vehicle is expected to be high	C3 - Difficult to control or uncontrollable
driving on city road is a regular activity	S2 - Severe and life-threatening	Speed of vehicle is expected to be low	C2 - Normally controllable
driving on city road is a regular activity	S2 - Severe and life-threatening	Speed of vehicle is expected to be low	C2 - Normally controllable

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	ASIL Determination	Safety Goal
The malfunction was that the Lane Departure Warning (LDW) applied too much oscillating torque and frequency, so drivers loss control of the vehicle steering. Because steering was lost at high speeds, a vehicle accident would not be controllable. We will label this hazardous situation as C3.	C	The oscillating steering torque from the lane departure warning function shall be limited
The malfunction was that the lane keeping assistance was always on and had no time limit, so drivers could take both hands off the wheel. Because hands aren't on the wheel at high speeds, a vehicle accident would not be controllable. We will label this hazardous situation as C3.	B	The lane keeping assistance function shall be time limited, and the additional steering torque shall end after a given time interval so that the driver cannot misuse the system for autonomous driving.
At city speed, most drivers has change to control the situation by applying brakes.	B	The camera sensor ECU shall check the LA on/off, active/inactive and malfunction warning status before sending torque requests to the lane departure warning system
At city speed, most drivers has change to control the situation by applying brakes.	B	The lane keeping assistance function shall deactivate when the camera sensor stops detecting lanes and shall warn the driver of its deactivation.

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	Front collision with obstacle

Hazard Identification	
Deviation Details	Hazardous Event (resulting effect)
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV04 - Front collision with obstacle
Both headlights stop working	EV08 - Collision with other vehicle
Both headlights stop working	EV04 - Front collision with obstacle

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into	Total loss of low	E4 - High probability

Event Details	Hazardous Event Description	Exposure (of situation)
Vehicle crashes into	Total loss of low	E4 - High probability
Vehicle crashes into	Total loss of low	E1 - Very low probability
Vehicle crashes into	Total loss of low	E2 - Low probability
Vehicle crashes into	Total loss of low	E4 - High probability
Vehicle crashes into	Total loss of low	E2 - Low probability

Hazardous	
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a	S1 - Light and moderate injuries

Hazardous	
Rationale (for exposure)	Severity (of potential harm)
night driving in the city is a	S1 - Light and moderate injuries
night driving in the city on	S1 - Light and moderate injuries
High driving is part of regular	S3 - Life-threatening or fatal injuries
country driving is part of regular	S3 - Life-threatening or fatal injuries
country driving is part of regular	S3 - Life-threatening or fatal injuries

Event Classification	
Rationale (for severity)	Controllability (of hazardous event)
In city traffiic, speed of vehicle is expected to be low	C0 - Controllable in general

Event Classification	
Rationale (for severity)	Controllability (of hazardous event)
In city traffiic, speed of vehicle is expected to be low	C0 - Controllable in general
In city traffiic, speed of vehicle is expected to be low	C1 - Simply controllable
On highway speed of vehicle is expected to be high	C2 - Normally controllable
On country roads speed of vehicle is expected to be	C1 - Simply controllable
On country roads speed of vehicle is expected to be	C3 - Difficult to control or uncontrollable

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	ASIL Determination	Safety Goal
At city speed, most drivers will be able to	QM	Total Loss of Beam

	Determination of ASIL and Safety Goals	
Rationale (for controllability)	ASIL Determination	Safety Goal
At city speed, most drivers will be able to	QM	Total loss of low beam
On completely unilluminated city roads,	QM	Total loss of low beam
When driving on highway with low beam,	A	Total loss of low beam
Since there is usually no other form of	B	Total loss of low beam
Since there is usually no other form of	B	Total loss of low beam

Exposure

ID	Description
E0	Incredible
E1	Very low probability
E2	Low probability
E3	Medium probability
E4	High probability

Severity

ID	Description
S0	No injuries
S1	Light and moderate injuries
S2	Severe and life-threatening injuries
S3	Life-threatening or fatal injuries

Controllability

ID	Description
C0	Controllable in general
C1	Simply controllable
C2	Normally controllable
C3	Difficult to control or uncontrollable

Duration (of situation)
Not specified
<1 % of average operating time
1 % to 10 % of average operating time
>10 % of average operating time

Remarks
No injuries
Light and moderate injuries
Severe and life-threatening injuries (survival probable)
Life-threatening injuries (survival uncertain), fatal injuries

Remarks
Controllable in general
99 % or more of all drivers or other traffic participants are usually
90 % or more of all drivers or other traffic participants are usually
Less than 90 % of all drivers or other traffic participants are usual

Frequency (of situation)	Reference
	E0 - Incredible
Occurs less often than once a year for the great majority of drivers	E1 - Very low probability
Occurs a few times a year for the great majority of drivers	E2 - Low probability
Occurs once a month or more often for an average driver	E3 - Medium probability
Occurs during almost every drive on average	E4 - High probability

Probability of Injuries	Reference
AIS 0 and less than 10 % probability of AIS 1-6	S0 - No injuries
More than 10 % probability of AIS 1-6 (and not S2 or S3)	S1 - Light and moderate injuries
More than 10 % probability of AIS 3-6 (and not S3)	S2 - Severe and life-threatening injuries
More than 10 % probability of AIS 5-6	S3 - Life-threatening or fatal injuries

	Reference
	C0 - Controllable in general
/ able to avoid harm	C1 - Simply controllable
/ able to avoid harm	C2 - Normally controllable
lly able, or barely able, to avoid harm	C3 - Difficult to control or uncontrollable
